

UNITED STATES DISTRICT COURT
EASTERN DISTRICT OF MISSOURI
NORTHERN DIVISION

J. PATRICK HAYS,)	
)	
Plaintiff,)	
)	Case No.:
v.)	
)	<u>JURY TRIAL DEMANDED</u>
SYNGENTA CROP PROTECTION, LLC.,)	
SYNGENTA AG, and CHEVRON)	
PHILLIPS CHEMICAL COMPANY LP,)	
)	
Defendants.)	

COMPLAINT

Plaintiff J. Patrick Hays brings this Complaint for damages against defendants Syngenta Crop Protection, LLC, Syngenta AG, and Chevron Phillips Chemical Company LP, and alleges:

Nature of the Case

1. This case arises out of Defendants' wrongful conduct in connection with the design, development, manufacture, testing, packaging, promoting, marketing, advertising, distribution, and sale of paraquat dichloride, also known as paraquat methosulfate ("Paraquat"), the active ingredient in herbicide products that are now known to cause Parkinson's disease. As such, Paraquat is dangerous to human health and unfit to be marketed and sold in commerce, particularly without proper warnings and directions as to the dangers associated with its use. Plaintiff was exposed to Paraquat

for a sustained period of time, and now suffers from Parkinson's disease.

Parties

2. Plaintiff is a natural person and at all relevant times was a resident and citizen of the State of Missouri. Plaintiff brings this action for personal injuries sustained by exposure to the active ingredient Paraquat in Defendants' Paraquat products. As a direct and proximate result of being exposed to Paraquat, Plaintiff suffers from Parkinson's disease and numerous complications associated with Parkinson's disease.

3. Defendant Syngenta Crop Protection, LLC ("SCP") is a Delaware limited liability company with its principal place of business in at 410 South Swing Road, Greensboro, North Carolina 27409-2012. SCP is a subsidiary of Syngenta Seeds.

4. SCP advertises, promotes, markets, sells, and distributes Paraquat and other herbicides and pesticides to distributors, dealers, applicators, and farmers, including in the State of Missouri.

5. Defendant Syngenta AG is a corporation organized and existing under the laws of Switzerland with its principal place of business at Schwarzwaldallee 215, 4058 Basel-Stadt, Switzerland. Syngenta AG was formed in 2000 as a result of the merger of Novartis Agribusiness and Zeneca Agrochemicals. Syngenta AG was a publicly traded company on the Swiss stock exchange and American Depositary Receipts for Syngenta AG were traded on the New York Stock Exchange until it was acquired by ChemChina, a Chinese state-owned entity, in 2017. It has since been de-listed. On information and belief,

Syngenta AG continues to operate as a separate unit of ChemChina. Syngenta AG wholly owns, through its ownership of Syngenta Seeds, SCP.

6. Syngenta AG represents itself as a global company. According to Syngenta's website, Syngenta AG's Board of Directors "has full and effective control of the company and holds ultimate responsibility for the company strategy."

7. One or more members of Syngenta AG's Board of Directors or the Executive Committee established by the Board of Directors also serve as member(s) of the Board of Directors of SCP and/or Syngenta Seeds.

8. Syngenta AG's Executive Committee formulates and coordinates the global strategy for Syngenta businesses, and maintains central corporate policies requiring Syngenta subsidiaries, including SCP, to operate under the general guidance of the Syngenta group control.

9. Employees of the Syngenta group as a whole maintain reporting relationships that are not defined by legal, corporate relationships, but in fact cross those corporate lines.

10. SCP is subject to additional oversight that requires it to seek approval for certain decisions from higher levels within the functional reporting structure-including in some instances Syngenta AG. SCP's appointments of senior management personnel also may require, in some instances, approval from individuals or governing bodies that are higher than SCP's board of directors.

11. Also, Syngenta AG maintains a central global finance function that governs SCP, which requires SCP to function under the Syngenta AG umbrella and not independently.

12. In addition, SCP regularly refers to itself as “Syngenta,” with no further description.

13. Chevron Phillips Chemical Company LP is a Delaware limited partnership with its principal place of business in The Woodlands, Texas.

Jurisdiction and Venue

14. This Court has personal jurisdiction over SCP under §506.500 because SCP transacts business in the Eastern District of Missouri and is a corporation doing business within the Eastern District of Missouri. SCP knows that its Paraquat products are and were sold throughout the State of Missouri. In addition, SCP maintains sufficient contacts with the State of Missouri such that this Court’s exercise of personal jurisdiction over it does not offend traditional notions of fair play and substantial justice. Specific to this case, SCP engaged in the business of developing, manufacturing, testing, packaging, marketing, distributing, and labeling pesticides containing Paraquat. SCP purposefully availed itself of the privilege of conducting activities within this District, thus invoking the benefits and protections of its laws.

15. This Court has personal jurisdiction over Syngenta AG under §506.500 because, for the reasons alleged above, the jurisdictional contacts of SCP in this state are attributable to Syngenta AG because of the unusually high degree of control Syngenta

AG exercises over these subsidiaries. *See, e.g., Blanks v. Fluor Corp.*, 450 S.W.3d 308, 375 (Mo. Ct. App. 2014). In addition, on information and belief, Syngenta AG and SCP acted in concert under agreements or other arrangements to act in a collective manner and/or as joint venturers regarding the actions and events made the subject of this Complaint. Syngenta AG and SCP are therefore jointly and severally liable for the acts for which the Plaintiff complains.

16. In 2011, the U.S. District Court for the Southern District of Illinois held that Syngenta AG's unusually high degree of control made Syngenta Crop Protection the agent or alter ego of Syngenta AG and therefore subjected Syngenta AG to jurisdiction in the State of Illinois. *See City of Greenville, Ill. v. Syngenta Crop Prot., Inc.*, 830 F. Supp. 2d 550 (S.D. Ill. 2011).

17. This Court has personal jurisdiction over Chevron Phillips under §506.500 because Chevron Phillips advertises and sells goods, specifically pesticides containing Paraquat, throughout this District of Missouri. It derived substantial revenue from goods and products used in this District. It expected its acts to have consequences within the State of Missouri and derived substantial revenue from interstate commerce. Chevron Phillips purposefully availed itself of the privilege of conducting activities within the State of Missouri, thus invoking the benefits and protections of its laws.

18. Venue is proper in this District under §508.010 because Plaintiff was exposed to Paraquat in Monroe County, Missouri.

**Tolling of Applicable Statute of Limitations
Discovery Rule Tolling**

19. Plaintiff had no way of knowing about the risk of serious illness associated with exposure to Paraquat until approximately March 2021.

20. Within the time period of any applicable statutes of limitations, Plaintiff could not have discovered, through the exercise of reasonable diligence, that exposure to Paraquat is injurious to human health.

21. Plaintiff did not discover and did not know the facts that would cause a reasonable person to suspect, the risks associated with exposure to Paraquat; nor would a reasonable and diligent investigation by Plaintiff have disclosed that Paraquat would cause Plaintiff's injuries.

22. For these reasons, all applicable statutes of limitations have been tolled by operation of the discovery rule with respect to Plaintiff's claims.

Fraudulent Concealment Tolling

23. All applicable statutes of limitations have also been tolled by Defendants' knowing and active fraudulent concealment and denial of the facts alleged herein throughout the time period relevant to this action.

24. Instead of disclosing critical safety information about Paraquat, Defendants consistently and falsely represented the safety of Paraquat.

Estoppel

25. Defendants were under a continuous duty to disclose to consumers, users, and other persons coming into contact with its products, including Plaintiff, accurate safety information concerning its products and the risks associated with the use of and/or exposure to Paraquat.

26. Instead, Defendants knowingly, affirmatively, and actively concealed safety information concerning Paraquat and the serious risks associated with the use of and/or exposure to its products.

27. Based on the foregoing, Defendants are estopped from relying on any statutes of limitations in defense of this action.

Factual Allegations

Development of Paraquat

28. The herbicidal properties of Paraquat were discovered by ICI in 1955.¹

29. ICI, which stands for the Imperial Chemical Industries PLC, developed, researched, manufactured, and tested Paraquat through its Central Toxicology Laboratory in the early 1960s and produced the first chemical paraquat formulation, which it registered in England and introduced in certain markets under the brand name GRAMOXONE®, in 1962.

30. ICI was awarded a U.S. patent on herbicide formulations containing paraquat as

¹ Sagar, G.R., *Uses and Usefulness of Paraquat*, Human Toxicology (1987) 6:1, 7-11.

an active ingredient in 1962.

31. ICI's Central Toxicology Laboratory performed and submitted the health and safety studies of Paraquat to the United States Department of Agriculture ("USDA") and the United States Environmental Protection Agency ("EPA") to secure and maintain the registration of Paraquat and other pesticides for use in the United States.

32. In or around 1964, ICI entered into a licensing and distribution agreement with Chevron Chemical Company ("Chevron") to sell Paraquat in the United States. Under this ICI-Chevron Agreement, Chevron obtained an exclusive license to the patents and technical information to permit Chevron to formulate or have formulated, use, and sell Paraquat under the trade name GRAMOXONE® and other names in the United States and to sub-license others to do so. Some form of this agreement remained in effect until September 1986 when ICI paid Chevron for the early termination of its rights under the paraquat licensing and distribution agreement.

33. Through a long series of mergers, spin-offs, and related corporate transactions, ownership of ICI's Central Toxicology Laboratory was transferred to Syngenta Ltd., a wholly owned British subsidiary of Syngenta AG. Since that time, Syngenta Ltd.'s Central Toxicology Laboratory has continued to perform and submit health and safety studies to the EPA to secure and maintain the registration of Paraquat and other pesticides in the United States.

34. Through the same long series of mergers, spin-offs, and related corporate

transactions, ICI's agrochemical business was transferred to SCP.

35. From approximately September 1986 through the present, Syngenta has:

- a. manufactured Paraquat for use as an active ingredient in herbicides formulated and distributed for sale and use in the United States, including the State of Missouri;
- b. distributed Paraquat for use as an active ingredient in herbicides formulated and distributed for sale and use in the United States, including the State of Missouri;
- c. formulated Paraquat products distributed for sale and use in the United States, including the State of Missouri; and
- d. distributed Paraquat products for sale and use in the United States, including the State of Missouri.

36. Syngenta, through SCP, is now the leading manufacturer of Paraquat, which it sells under the brand name GRAMOXONE®.²

Paraquat Use

37. Paraquat is designed to kill broadleaf weeds and grasses before the planting or emergence of more than 100 field, fruit, vegetable, and plantation crops, to control weeds in orchards, and to desiccate (dry) plants before harvest.

38. Paraquat products are commonly sprayed multiple times per year on the same land, particularly when used to control weeds in orchards or on farms with multiple crops planted on the same land within a single growing season or year, and such use was

² Press Release, Federal Trade Commission, FTC Requires China National Chemical Corporation and Syngenta AG to Divest U.S. Assets as Condition of Merger (April 4, 2017), <https://www.ftc.gov/news-events/press-releases/2017/04/ftc-requires-china-national-chemical-corporation-syngenta-ag>.

as intended, directed, or at least foreseeable.

39. Paraquat is typically sold by Defendants to end-users in the form of a liquid concentrate (and less commonly in the form of granular solids) designed to be diluted with water before/or after loading it into the tank of a sprayer and applied by spraying it onto target weeds.

40. Paraquat concentrate is formulated with one or more “surfactants” to increase the ability of the herbicide to stay in contact with the leaf, penetrate the leaf’s waxy surface, and enter into plant cells, and the accompanying instructions typically told end-users to add a surfactant or crop oil (which typically contains a surfactant) before use.

41. Paraquat products are typically applied with a knapsack sprayer, hand-held sprayer, aircraft (*i.e.*, crop duster), truck with a pressurized tank, or tractor-drawn pressurized tank, and such use was as intended, directed, or at least foreseeable.

Paraquat Exposure

42. Each year, Paraquat is applied to approximately 15 million acres of agricultural crops, including corn, soybeans, wheat, cotton, fruit and vegetables, rice, orchards and grapes, alfalfa, hay and other crops.

USGS, Pesticide National Synthesis Project (2020), https://water.usgs.gov/nawqa/pnsp/usage/maps/show_map.php?year=2017&map=PARAQUAT&hilo=L&disp=Paraquat.

43. At all relevant times, it was reasonably foreseeable that when Paraquat was used in its intended, directed, and/or foreseeable manner, including mixing, loading, spraying, or cleaning, applicators of Paraquat and others nearby would be exposed to it.

44. At all relevant times it was reasonably foreseeable that users and others nearby would be exposed to Paraquat through contact with skin, breathing it in, and/or ingesting it.

Parkinson's Disease

45. Parkinson's disease is a terrible disease classified as a progressive neurodegenerative disorder of the brain that affects primarily the motor system, the part of the central nervous system that controls movement.

46. Parkinson's Disease is now one of the fastest growing neurological condition diagnoses on the planet.

47. In a 2018 study by the Parkinson's Project, it is estimated that 1.2 million Americans will have been diagnosed with Parkinson's by the year 2030.³

48. The characteristic symptoms of Parkinson's disease are its "primary" motor symptoms: resting tremor (shaking movement when the muscles are relaxed); bradykinesia (slowness in voluntary movement and reflexes); rigidity (stiffness and resistance to passive movement); and postural instability (impaired balance).

49. Parkinson's primary motor symptoms typically result in "secondary" motor symptoms such as freezing of gait; shrinking handwriting; mask-like expression; slurred, monotonous, quiet voice; stooped posture; muscle spasms; impaired coordination; difficulty swallowing; and excess saliva and drooling caused by reduced swallowing movements.

50. Non-motor symptoms, such as loss of or altered sense of smell; constipation; low blood pressure on rising to stand; sleep disturbances; and depression, are present in most cases, often for years before the primary motor symptoms appear.

51. There is currently no cure for Parkinson's disease. Existing treatments do not slow or stop its progression; only temporarily and partially relieve the motor symptoms. These

³ Marras, C., Beck, J.C., Bower, J.H. *et al.*, *Prevalence of Parkinson's disease across North America*, *njp Parkinson's Disease* 4: 21 (2018). <https://doi.org/10.1038/s41531-018-0058-0>.

treatments also have unwelcome side effects the longer they are used.

52. One of the primary pathophysiological hallmarks of Parkinson's disease is the selective degeneration and death of dopaminergic neurons (dopamine-producing nerve cells) in a part of the brain called the substantia nigra pars compacta ("SNpc").

53. Dopamine is a neurotransmitter (a chemical messenger that transmits signals from one neuron to another neuron, muscle cell, or gland cell) that is critical to the brain's control of motor function (among other things).

54. The death of dopaminergic neurons in the SNpc decreases the production of dopamine.

55. Once dopaminergic neurons die, the body cannot replace them. When enough dopaminergic neurons die, dopamine production falls below the level the brain requires to properly control motor function, thus resulting in the motor symptoms of Parkinson's disease.

56. The presence of Lewy bodies (insoluble aggregates of a protein called alpha-synuclein) in many of the remaining dopaminergic Neurons in the SNpc is another of the primary pathophysiological hallmarks of Parkinson's disease.

57. Dopaminergic neurons are particularly susceptible to oxidative stress, a disturbance in the normal balance between oxidants present in cells and cells' antioxidant defenses.

58. Oxidative stress is a major factor in—if not the precipitating cause of—the

degeneration and death of dopaminergic neurons in the SNpc and the accumulation of Lewy bodies in the remaining dopaminergic neurons that are the primary pathophysiological hallmarks of Parkinson's disease.

Paraquat's Toxicity

59. Paraquat is highly toxic to plants and animals.

60. Paraquat is designed to injure and kill plants by creating oxidative stress, which causes or contributes to cause the degeneration and death of plant cells.

61. Similarly, Paraquat injures and kills animals by creating oxidative stress, which causes or contributes to cause the degeneration and death of animal cells.

62. Paraquat creates oxidative stress in the cells of plants and animals because of "redox properties" that are inherent in its chemical composition and structure—it is a strong oxidant and readily undergoes "redox cycling" in the presence of molecular oxygen, which is plentiful in living cells.

63. The redox cycling of Paraquat in living cells interferes with cellular functions that are necessary to sustain life—with photosynthesis in plant cells, and with cellular respiration in animal cells.

64. The redox cycling of Paraquat in living cells creates a "reactive oxygen species" known as a superoxide radical, an extremely reactive molecule that can initiate a cascading series of chemical reactions that creates other reactive oxygen species that damage lipids, proteins, and nucleic acids, molecules that are essential components of the

structures and functions of living cells.

65. Because the redox cycling of Paraquat can repeat indefinitely in the conditions typically present in living cells, a single molecule of Paraquat can trigger the production of countless molecules of destructive superoxide radical.

66. Paraquat's redox properties have been known within the science community since at least the 1930s.

67. The same oxidation and redox potentials that make Paraquat highly toxic to plant cells and other types of animal cells make Paraquat highly toxic to nerve cells, including dopaminergic neurons, and create a substantial risk to all persons exposed to Paraquat.

68. The scientific community has known since the 1960s that paraquat is toxic to the cells of plants, animals, and humans because it creates oxidative stress through redox cycling.

69. The surfactants with which the concentrates containing Paraquat manufactured, distributed, and sold by Defendants, Defendants' corporate predecessors, and others with whom they acted in concert were likely to increase Paraquat's toxicity to humans by increasing its ability to stay in contact with or penetrate the skin, mucous membranes, and other epithelial tissues, including tissues of the mouth, nose and nasal passages, trachea, and conducting airways, the lungs, and the gastrointestinal tract.

70. Because Paraquat is highly poisonous, the form that is marketed in the United States has a blue dye to keep it from being confused with beverages such as coffee, a

sharp odor to serve as a warning, and an added agent to cause vomiting if someone drinks it.

71. Paraquat is a “restricted use pesticide” under federal law, *see* 40 C.F.R. § 152.175, which means it is “limited to use by or under direct supervision of a certified applicator.”

Paraquat Causes Parkinson’s Disease

72. The same redox properties that make Paraquat toxic to plant cells and other types of animal cells make it toxic to dopaminergic neurons—that is, Paraquat is a strong oxidant that interferes with the function of, damages, and ultimately kills dopaminergic neurons by creating oxidative stress through redox cycling.

73. Although Parkinson’s disease is not known to occur naturally in any species other than humans, Parkinson’s disease research is often performed using “animal models,” in which scientists use Paraquat to artificially produce the symptoms of Parkinson’s disease in animal test subjects.

74. Paraquat is one of only a handful of toxins that scientists use to produce animal models of Parkinson’s disease.

75. In animal models of Parkinson’s disease, hundreds of studies involving various routes of exposure have found that Paraquat creates oxidative stress that results in the degeneration and death of dopaminergic neurons in the SNpc, other pathophysiology consistent with that seen in human Parkinson’s disease, and motor deficits and behavioral changes consistent with those commonly seen in human Parkinson’s disease.

76. Hundreds of in vitro studies (experiments in test tube, culture dish, or other controlled experimental environment) have found that Paraquat creates oxidative stress that results in the degeneration and death of dopaminergic neurons (and many other types of animal cells).

77. In 1994, Dr. Afonso Bainy published a study concluding that paraquat in vitro exposure led to an increment in the anti-oxidant capacity of the red blood cell.⁴

78. In 2002, Dr. Gabriele Schmuck published a study concluding that cortical neurons were found to be more sensitive towards paraquat toxicity than astrocytes as shown by MTT and Neutral Red assay, two different cytotoxicity assays.⁵

79. In 2019, Dr. Liyan Hou published a study showing that paraquat and maneb exposure induced ferroptosis, a form of regulated cell death, in SHSY5Y dopaminergic cells.⁶

80. Many epidemiological studies (studies of the patterns and causes of disease in defined populations) have found an association between Paraquat exposure and Parkinson's disease, including multiple studies finding a two- to five-fold or greater increase in the risk of Parkinson's disease in populations with occupational exposure to Paraquat compared to populations without such exposure.

⁴ Bainy, AC, *et al*, *Influence of lindane and paraquat on oxidative stress-related parameters of erythrocytes in vitro*, Human & Experimental Toxicology (1994), 13:7 461-465.

⁶ Hou L, *et al*, *NADPH oxidase regulates paraquat and maneb-induced dopaminergic neurodegeneration through ferroptosis*, Toxicology (2019), 1:417 64-73.

81. In June 2011, Dr. Caroline Tanner published a study examining whether pesticides that cause mitochondrial dysfunction or oxidative stress, including Paraquat, were associated with Parkinson's Disease or clinical features of parkinsonism in humans.⁷ The study found that Paraquat use plays a role in human Parkinson's Disease and that "[b]ecause paraquat remains one of the most widely used herbicide worldwide (Frabotta 2009), this finding potentially has great public health significance."⁸

82. In November 2012, Dr. Samuel Goldman published a study entitled "Genetic Modification of the Association of Paraquat and Parkinson's Disease."⁹ The study found that those who applied Paraquat and had the GSTT1*0 genotype were 11.1 times more likely to develop Parkinson's disease. Paraquat damages neurons by generating oxidative stress through redox cycling; the GSTT1 gene encodes an enzyme that prevents redox cycling. Around 20% of Caucasians do not have the GSTT1 gene and thus have the GSTT1*0 genotype. The lack of the GSTT1 gene may cause those with the GSTT1*0 genotype to be more vulnerable to Paraquat's redox cycling mechanism and therefore more likely to develop Parkinson's.

83. In July 2002, Dr. Alison McCormack published a study examining the effect of Paraquat on mice.¹⁰ The study found that Paraquat injections selectively kill

⁷ Tanner, Caroline M., et al., *Rotenone, paraquat, and Parkinson's disease*. 119 Environ Health Perspect. 866-872 (2011).

dopaminergic neurons in the SNpc.

84. Dr. Robert Nisticó published a study in April 2011 that concluded that Paraquat causes the cell death of dopaminergic neurons within the substantia nigra, serotonergic neurons within the raphe nuclei, and noradrenergic neurons within the locus coeruleus.¹¹ The researchers noted that Parkinson's pathology begins in the SNpc and "progressively involves noradrenergic and serotonergic neurons within the locus coeruleus and raphe nuclei."

85. In December 2011, Dr. Phillip Rappold published a study demonstrating how Paraquat entered dopaminergic neurons and killed the neurons through oxidative stress.¹² Paraquat converted to PQ⁺, which entered dopaminergic neurons through their dopamine transporters. PQ⁺ then also reacted with dopamine, which enhanced the Paraquat-induced oxidative stress. The researchers argued that dopaminergic neurons are more vulnerable to Paraquat because PQ⁺ reacts with dopamine to increase oxidative stress.

86. In November 2012, Dr. Pei-Chen Lee published a study examining the associations between traumatic brain injuries, Paraquat, and Parkinson's disease.¹³ The study found an association between Paraquat exposure and Parkinson's.

¹¹ R. Nisticó et al., *Paraquat- and Rotenone-Induced Models of Parkinson's Disease*, 24 Int. J. Immunopathol. Pharmacol. 313-322 (2011).

¹² Phillip M. Rappold et al., *Paraquat Neurotoxicity is Mediated by the Dopamine Transporter and Organic Cation Transporter-3*, 108 Proc. Natl. Acad. Of Sci. U.S.A. 20766-20771 (2011).

¹³ Pei-Chen Lee et al., *Traumatic Brain Injury, Paraquat Exposure, and their Relationship to Parkinson Disease*, 79 Neurology 2061-2066 (2012).

87. In May 2013, Dr. Gianni Pezzoli published a meta-analysis examining seven studies on Paraquat exposure.¹⁴ The meta-analysis evaluated the seven studies together and separately evaluated the highest quality studies; in both analyses, those exposed to Paraquat were more likely to develop Parkinson's disease.

88. In a memorandum from March 2, 2016 recommending mitigation measures for Paraquat, the EPA acknowledged the numerous studies linking Paraquat to Parkinson's disease stating, "[t]here is a large body of epidemiology data on paraquat dichloride use and Parkinson's disease."¹⁵

Paraquat is Already Prohibited in Countries Around the World

89. Switzerland, where Syngenta AG maintains its headquarters, has not only prohibited the use of Paraquat since 1989 but recently amended the law on chemical substances to prohibit the export of Paraquat to help protect the health and environment in importing countries, particularly in the developing world.¹⁶

90. The Ministry of Agriculture of the People's Republic of China classifies Paraquat as extremely toxic. Paraquat's use or sale in China has been prohibited since September 1, 2020.¹⁷

¹⁴ Gianni Pezzoli & Emanuele Cereda, *Exposure to Pesticides or Solvents and Risk of Parkinson Disease*, 80 *Neurology* 2035-2041 (2013).

¹⁷ Business Wire, *2018 Market Research on Paraquat in China*, AP, (September 10, 2018), <https://apnews.com/press-release/pr-businesswire/0625d4cb368247b38ea803ff3842c203>.

91. Paraquat use has been banned in the European Union since 2007.¹⁸

Registration of Pesticides Under Federal Law

92. The manufacture, formulation, and distribution of herbicides, such as Paraquat, are regulated under the Federal Insecticide, Fungicide, and Rodenticide Act (“FIFRA”), 7 U.S.C. § 136 *et seq.* FIFRA requires that all pesticides be registered with the Environmental Protection Agency (“EPA”) before their distribution, sale, or use, except as described by FIFRA 7 U.S.C. § 136a(a).

93. The EPA requires the registrant of a pesticide to conduct a variety of tests as part of the registration process to evaluate the potential for exposure to pesticides, toxicity to people and other potential non-target organisms, and other adverse effects on the environment.

94. Registration by the EPA is not an assurance or finding of safety. The determination the EPA makes in registering or re-registering a product is not that the product is “safe,” but rather that use of the product in accordance with its label directions “will not generally cause unreasonable adverse effects on the environment.” 7 U.S.C. § 136(a)(c)(5)(D).

95. FIFRA defines “unreasonable adverse effects on the environment” to mean “any unreasonable risk to man or the environment, taking into account the economic, social,

¹⁸ *EU Court Reimposes Ban on Paraquat Weedkiller*, Reuters, July 11, 2007, <https://www.reuters.com/article/environment-eu-paraquat-dc/eu-court-reimposes-ban-on-paraquat-weedkiller-idUSL1166680020070711>.

and environmental costs and benefits of the use of any pesticide.” 7 U.S.C. § 136(bb). FIFRA thus requires the EPA to make a risk/benefit analysis in determining whether a registration should be granted or allowed to continue to be sold in commerce.

96. FIFRA generally requires that the registrant conduct health and safety testing of pesticides. The government is not required to, nor does it generally, perform the product tests that are required of the manufacturer.

Syngenta’s False Representations Regarding the Safety of Paraquat

97. Syngenta has long misrepresented and denied the harmful side effects of its Paraquat-based products.

98. In response to growing concern about the safety of Paraquat, Syngenta established a website at www.paraquat.com for the purpose of persuading the public that Paraquat is safe.

99. Syngenta’s statements proclaiming the safety of Paraquat and disregarding its dangers were designed to mislead the agricultural community and the public at large, including Plaintiff.

100. As of the filing of this Complaint, www.paraquat.com has been taken down by Syngenta.

101. Defendants knew or should have known that Paraquat was a highly toxic substance that can cause severe neurological injuries and impairment.

102. Defendants failed to appropriately and adequately test its Paraquat-based

products to protect Plaintiff from Paraquat.

103. Despite its knowledge that exposure to Paraquat was dangerous, Defendants continued to promote their Paraquat-based products as safe.

104. In fact, in 2003, when Syngenta was dealing with lawsuits regarding another toxic herbicide, atrazine, it was reported that “Sherry Ford, the communications manager, wrote in her notebook that the company ‘should not phase out [atrazine] until we know about’ the Syngenta herbicide Paraquat, which has also been controversial, because of studies showing that it might be associated with Parkinson’s disease. She noted that atrazine ‘focuses attention away from other products.’”¹⁹

105. Defendants’ failure to adequately warn Plaintiff resulted in (1) Plaintiff being exposed to Paraquat; and (2) scientists and physicians failing to warn and instruct the public, particularly those living in agricultural areas where Paraquat-based pesticides are heavily sprayed, about the risk of Parkinson’s disease with exposure to Paraquat.

106. By reason of the foregoing, Plaintiff is severely and permanently injured.

107. By reason of the foregoing acts and omissions, Plaintiff has endured and continues to suffer, emotional and mental anguish, medical expenses, and other economic and non-economic damages, as a result of Defendants’ actions and inactions.

¹⁹ Rachel Aviv, *A Valuable Reputation*, The New Yorker, (Feb 3, 2014), <https://www.newyorker.com/magazine/2014/02/10/a-valuable-reputation>.

Plaintiff's Exposure to Paraquat

108. Plaintiff was regularly exposed to Paraquat for approximately 40 years as a result of direct exposure, pesticide drift, and contamination of his drinking water.

109. Plaintiff subsequently began experiencing Parkinson's symptoms about 10 years ago and was officially diagnosed with Parkinson's Disease in approximately 2016.

110. As a result of Plaintiff's injuries, Plaintiff has incurred significant economic and non-economic damages.

111. Plaintiff was directly exposed to Defendants' Paraquat products from approximately 1965 through 2005.

112. Plaintiff applied Paraquat as a certified applicator on the farmlands where he lived and farmed in Monroe County.

113. On numerous occasions, Plaintiff could feel the Paraquat on his skin during mixing and application of the Paraquat products. On multiple instances, Plaintiff remembers being coated with Paraquat while applying it. Plaintiff applied Paraquat via groundboom.

114. Additionally, Plaintiff lived in close proximity to additional fields where Paraquat products were applied.

115. On information and belief, Plaintiff was also exposed to Paraquat that was applied to these fields due to drift.

116. Plaintiff estimates that he was exposed to Defendants' Paraquat products in

excess of one hundred times.

117. During the entire time that Plaintiff was exposed to Paraquat, Plaintiff did not know that exposure to Paraquat was injurious to Plaintiff's health or the health of others.

118. Plaintiff first learned that exposure to Paraquat can cause Parkinson's disease and other serious illnesses sometime after February 2021.

Count I – Negligence

119. Plaintiff re-alleges each paragraph above as if fully set forth herein.

120. Defendants had a duty to exercise ordinary care in the designing, researching, testing, manufacturing, marketing, supplying, promoting, packaging, sale, and/or distribution of Paraquat into the stream of commerce, including a duty to assure that the product would not cause those exposed to it to suffer unreasonable, dangerous side effects.

121. Defendants failed to exercise ordinary care in the designing, researching, testing, manufacturing, marketing, supplying, promoting, packaging, sale, quality assurance, quality control, and/or distribution of Paraquat in that Defendants knew or should have known that persons foreseeably exposed to Paraquat created a high risk of unreasonable, dangerous side effects, including, but not limited to, the development of Parkinson's disease, as well as other severe and personal injuries that are permanent and lasting in nature, physical pain and mental anguish, including diminished enjoyment of life, as well as need for lifelong medical treatment, monitoring, and/or medications.

122. The negligence by Defendants, their agents, servants, and/or employees, included but was not limited to the following acts and/or omissions:

- a. Manufacturing, producing, promoting, formulating, creating, and/or designing Paraquat without thoroughly testing it;
- b. Failing to test Paraquat and/or failing to adequately, sufficiently, and properly test Paraquat;
- c. Not conducting sufficient testing programs to determine whether Paraquat was safe for use; in that Defendants knew or should have known that Paraquat was unsafe and unfit for use because of the dangers to those exposed to it;
- d. Not conducting sufficient testing programs and studies to determine Paraquat's effects on human health even after Defendants had knowledge of studies linking Paraquat to latent neurological damage and neurodegenerative disease, including Parkinson's disease;
- e. Negligently failing to adequately and correctly warn the Plaintiff, the public, the medical and agricultural professions, and the EPA of the dangers of Paraquat;
- f. Failing to provide adequate cautions and warnings to protect the health of persons who would reasonably and foreseeably be exposed to Paraquat;
- g. Negligently marketing, advertising, and recommending the use of Paraquat without sufficient knowledge as to its dangerous propensities;
- h. Negligently representing that Paraquat was safe for use for its intended purpose when, in fact, it was unsafe;
- i. Negligently representing that Paraquat had equivalent safety and efficacy as other forms of herbicides;
- j. Negligently designing Paraquat in a manner that was dangerous to others;
- k. Negligently manufacturing Paraquat in a manner that was dangerous to others;

- l. Negligently producing Paraquat in a manner that was dangerous to others;
- m. Negligently formulating Paraquat in a manner that was dangerous to others;
- n. Concealing information from the Plaintiff while knowing that Paraquat was unsafe, dangerous, and/or non-conforming with EPA regulations;
- o. Improperly concealing and/or misrepresenting information from the Plaintiff, scientific and medical professionals, and/or the EPA, concerning the severity of risks and dangers of Paraquat compared to other forms of herbicides; and
- p. Negligently selling Paraquat with a false and misleading label.

123. Defendants under-reported, underestimated, and downplayed the serious dangers of Paraquat.

124. Defendants were negligent in the designing, researching, supplying, manufacturing, promoting, packaging, distributing, testing, advertising, warning, marketing, and selling of Paraquat in that Defendants:

- a. Failed to use ordinary care in designing and manufacturing Paraquat products so as to avoid the aforementioned risks to individuals when paraquat was used as an herbicide;

- b. Failed to accompany Paraquat products with proper and/or accurate warnings regarding all possible adverse effects associated with exposure to paraquat;

- c. Failed to warn Plaintiff of the severity and duration of such adverse effects, as the warnings given did not accurately reflect the symptoms, or severity of the effects including, but not limited to, developing Parkinson's disease;

- d. Failed to conduct adequate testing, clinical testing and post-marketing surveillance to determine the safety of Paraquat;

- e. Misrepresented the evidence of paraquat's neurotoxicity; and

f. Was otherwise careless and/or negligent.

125. Despite the fact that Defendants knew or should have known that Paraquat caused, or could cause, unreasonably dangerous health effects, Defendants continue to market, manufacture, distribute, and/or sell Paraquat to consumers.

126. Defendants knew or should have known that consumers such as Plaintiff would foreseeably suffer injury as a result of Defendants' failure to exercise ordinary care.

127. Defendants' negligence was the proximate cause of Plaintiff's injuries, harm and economic loss, which Plaintiff suffered and will continue to suffer.

128. As a result of the foregoing acts and omissions, Plaintiff suffers from Parkinson's disease and related neurological issues, which are permanent and lasting in nature, physical disability, mental anguish, including diminished enjoyment of life, as well as financial expenses for hospitalization and medical care.

WHEREFORE, Plaintiff respectfully requests that this Court enter judgment in Plaintiff's favor for compensatory and punitive damages, together with interest, costs herein incurred, attorneys' fees and all relief as this Court deems just and proper.

Count II – Strict Products Liability (Design Defect)

129. Plaintiff re-alleges each paragraph above as if fully set forth herein.

130. At all times herein mentioned, Defendants designed, researched, manufactured, tested, advertised, promoted, sold, and/or distributed Paraquat products as described above to which Plaintiff was exposed, including in the State of Missouri.

131. Paraquat products were expected to and did reach the usual consumers, handlers, and persons coming into contact with it without substantial change in the condition in which they were produced, manufactured, sold, distributed, and/or marketed by Defendants; including in the State of Missouri.

132. At those times, paraquat products were in an unsafe, defective, and inherently dangerous condition, which was dangerous to users, and in particular, Plaintiff.

133. For many years, Plaintiff was exposed to Defendants' Paraquat products in the State of Missouri regularly and repeatedly for hours at a time resulting in regular, repeated, and prolonged exposure of Plaintiff to Paraquat.

134. The Paraquat products designed, researched, manufactured, tested, advertised, promoted, marketed, sold, and/or distributed by Defendants was defective in design or formulation in that, when they left the hands of the manufacturer and/or suppliers, the foreseeable risks exceeded the benefits associated with the design or formulation of the Paraquat products.

135. The Paraquat products designed, researched, manufactured, tested, advertised, promoted, marketed, sold, and/or distributed by Defendants were defective in design and/or formulation, in that, when they left the hands of Defendants or their manufacturers and/or suppliers, they were unreasonably dangerous, unreasonably dangerous in normal use, and they were more dangerous than an ordinary consumer would expect.

136. At all relevant times, Paraquat products were in a defective condition and unsafe, and Defendants knew or had reason to know they were defective and unsafe, especially when used in the form and manner as intended by Defendants. In particular, the Paraquat products were defective in the following ways:

a. Paraquat products were designed, manufactured, formulated, and packaged such that when so used, Paraquat was likely to be inhaled, ingested, and absorbed into the bodies of persons who used them, while they were being used, or entered fields or orchards where they have been sprayed or areas near where they had been sprayed; and

b. when inhaled, ingested, or absorbed into the bodies of persons who used them, were nearby while they were being used, or entered fields or orchards where they had been sprayed or areas near where they had been sprayed, Paraquat was likely to cause or contribute to cause latent, permanent, and cumulative neurological damage, and repeated neurodegenerative disease, including Parkinson's disease to develop over time and manifest long after exposure.

137. In breach of their duty to Plaintiff, Defendants acted negligently, and in conscious disregard for the safety of others:

a. failed to design, manufacture, formulate, and package Defendants' Paraquat products to make Paraquat unlikely to be inhaled, ingested, and absorbed into the bodies of persons who used them, were nearby while they were being used, or entered fields or orchards where they had been sprayed or areas near where they had been sprayed;

b. designed and manufactured Paraquat and designed and formulated Defendants' Paraquat products such that when inhaled, ingested, or absorbed into the bodies of persons who used Defendants' Paraquat products, were nearby while they were being used, or entered fields or orchards where they had been sprayed or areas near where they had been sprayed, Paraquat was likely to cause latent, cumulative, and permanent neurological damage, and repeated exposures were likely to cause or contribute to cause clinically significant neurodegenerative disease, including Parkinson's disease, to develop over time and manifest long after exposure;

c. failed to perform adequate testing to determine the extent to which exposure to Paraquat was likely to occur through inhalation, ingestion, and absorption; into the bodies of persons who used them, were nearby while they were being used, or entered fields or orchards where they had been sprayed or areas near where they had been sprayed;

d. failed to perform adequate testing to determine the extent to which spray drift from Defendants' Paraquat products was likely to occur, including their propensity to drift, the distance they were likely to drift, and the extent to which Paraquat spray droplets were likely to enter the bodies of persons spraying Defendants' Paraquat products or nearby during or after spraying;

e. failed to perform adequate testing to determine the extent to which Paraquat, when inhaled, ingested, or absorbed into bodies of persons who used Defendants' Paraquat products, were nearby while they were being used, or entered fields or orchards where they had been sprayed or areas near where they had been sprayed, was likely to cause or contribute to cause latent, cumulative, and permanent neurological damage, and the extent to which repeated exposures were likely to cause or contribute to cause clinically significant neurodegenerative disease, including Parkinson's disease, to develop over time and manifest long after exposure;

f. failed to perform adequate testing to determine the extent to which Paraquat, when formulated or mixed with surfactants or other pesticides, and inhaled, ingested, or absorbed into the bodies of persons who used Defendants' Paraquat products, were nearby while they were being used, or entered fields or orchards where they had been sprayed or areas near where they had been sprayed, was likely to cause or contribute to cause latent, cumulative, and permanent neurological damage, and the extent to which repeated exposures were likely to cause or contribute to cause significant neurodegenerative disease, including Parkinson's disease, to develop over time and manifest long after exposure;

g. failed to direct that Defendants' Paraquat products be used in a manner that would have made it unlikely for Paraquat to have been inhaled, ingested, or absorbed into the bodies of persons who used Defendants' Paraquat products, were nearby while they were being used, or entered fields or orchards where they had been sprayed or areas near where they had been sprayed; and

h. failed to warn that when inhaled, ingested, or absorbed into the bodies of persons who used Defendants' Paraquat products, were nearby while they were being used, or entered fields or orchards where they had been sprayed or areas near where

they had been sprayed, Paraquat was likely to cause or contribute to cause significant neurodegenerative disease, including Parkinson's disease, to develop over time and manifest long after exposure.

138. Defendants knew or should have known that at all relevant times that their Paraquat products were in a defective condition and were and are inherently dangerous and unsafe and would create a substantial risk of harm to persons who used them, were nearby while they were being used, or entered fields or orchards where they had been sprayed or areas near where they had been sprayed.

139. Armed with this knowledge, Defendants voluntarily designed their Paraquat products with a dangerous condition knowing that in normal, intended use, consumers such as Plaintiff would be exposed to it.

140. Plaintiff was exposed to Paraquat without knowledge of Paraquat's dangerous characteristics.

141. At the time of Plaintiff's exposure to Paraquat, Paraquat was being used for the purposes and in a manner normally intended, as a broad-spectrum pesticide.

142. The Paraquat products designed, researched, manufactured, tested, advertised, promoted, marketed, sold, and/or distributed by Defendants reached their intended users in the same defective and unreasonably dangerous condition in which it was manufactured.

143. Defendants designed, researched, manufactured, tested, advertised, promoted, marketed, sold, and/or distributed a defective product, which created an

unreasonable risk to the consumer and to Plaintiff in particular, and Defendants are therefore strictly liable for the injuries sustained by Plaintiff.

144. Plaintiff could not, by the exercise of reasonable care, have discovered Paraquat's defects herein mentioned or perceived its danger.

145. Defendants are thus strictly liable to Plaintiff for the manufacturing, marketing, promoting, distribution, and/or selling of a defective product.

146. Defendants' defective design of Paraquat products amounts to willful, wanton, and/or reckless conduct.

147. As a direct and proximate result of the defects in Defendants' Paraquat products were the cause or a substantial factor in causing Plaintiff's injuries.

148. As a result of the foregoing acts and omissions, Plaintiff developed Parkinson's disease, and suffered severe and personal injuries that are permanent and lasting in nature, physical pain, and mental anguish, including diminished enjoyment of life, and financial expenses for hospitalization and medical care.

WHEREFORE, Plaintiff respectfully requests that this Court enter judgment in Plaintiff's favor for compensatory and punitive damages, together with interest, costs herein incurred, attorneys' fees and all relief as this Court deems just and proper.

Count III – Strict Products Liability (Failure to Warn)

149. Plaintiff re-alleges each paragraph above as if fully set forth herein.

150. Defendants engaged in the business of selling, testing, distributing, supplying,

manufacturing, marketing, and/or promoting Paraquat in the State of Missouri, and through that conduct has knowingly and intentionally placed Paraquat into the stream of commerce with full knowledge that it reaches consumers such as Plaintiff who was exposed to it through ordinary and reasonably foreseeable uses.

151. Defendants did in fact sell, distribute, supply, manufacture, and/or promote Paraquat products. Additionally, Defendants expected the Paraquat that they were selling, distributing, supplying, manufacturing, and/or promoting to reach Plaintiff without any substantial change in the condition of the product from when it was initially distributed.

152. At the time of manufacture, Defendants knew, or in the exercise of ordinary care, should have known that:

- a. Defendants' Paraquat products were designed, manufactured, formulated, and packaged such that it was likely to be inhaled, ingested, and absorbed into the bodies of people who used it, who were nearby when it was being used, or who entered fields or orchards where it had been sprayed or areas near where it had been sprayed; and

- b. when inhaled, ingested, or absorbed into the body, it was likely to cause latent neurological damage that was both permanent and cumulative, and that repeated exposures were likely to cause neurodegenerative disease, including Parkinson's disease.

153. At all relevant times, Defendants' Paraquat products were in a defective condition defective such that it was unreasonably dangerous to those exposed to it and was so at the time it was distributed by Defendants and at the time Plaintiff were exposed to and/or ingested the product. The defective condition of Paraquat was due in part to

the fact that it was not accompanied by proper warnings regarding its toxic qualities and possible health effects, including, but not limited to, developing Parkinson's disease as a result of exposure.

154. Defendants' Paraquat products did not contain a necessary warning or caution statement that, if complied with, would have been adequate to protect the health of those exposed in violation of 7 U.S.C. § 136j(a)(1)(E).

155. Defendants' failure to include a necessary warning or caution statement that, if complied with, would have been adequate to protect the health of those exposed.

156. Defendants could have revised Paraquat's label to provide additional warnings.

157. This defect caused serious injury to Plaintiff, who was exposed to Paraquat in its intended and foreseeable manner.

158. At all relevant times, Defendants had a duty to properly design, manufacture, compound, test, inspect, package, label, distribute, market, examine, maintain supply, provide proper warnings, and take such steps to assure that the product did not cause users to suffer from unreasonable and dangerous side effects.

159. Defendants labeled, distributed, and promoted a product that was dangerous and unsafe for the use and purpose for which it was intended.

160. Defendants failed to warn of the nature and scope of the health risks associated with Paraquat, namely its toxic properties and its propensity to cause or serve as a

substantial contributing factor in the development of Parkinson's disease.

161. Defendants knew of the probable consequences of exposure to Paraquat. Despite this fact, Defendants failed to exercise reasonable care to warn of the dangerous toxic properties and risks of developing Parkinson's disease from Paraquat exposure, even though these risks were known or reasonably scientifically knowable at the time of distribution. Defendants willfully and deliberately failed to avoid the consequences associated with its failure to warn, and in doing so, acted with conscious disregard for Plaintiff's safety.

162. At the time of exposure, Plaintiff could not have reasonably discovered any defect in Paraquat through the exercise of reasonable care.

163. Defendants, as a manufacturer and/or distributor of Paraquat, are held to the level of knowledge of an expert in the field.

164. Plaintiff reasonably relied on the skill, superior knowledge, and judgment of Defendants.

165. Had Defendants properly disclosed the risks associated with Paraquat, Plaintiff would have taken steps to avoid exposure to Paraquat.

166. The information that Defendants provided failed to contain adequate warnings and precautions that would have enabled its users to use the product safely and with adequate protection. Instead, Defendants disseminated information that was inaccurate, false, and misleading and that failed to communicate accurately or adequately the

comparative severity, duration, and extent of the risk of injuries associated with use of and/or exposure to Paraquat; continued to promote the efficacy of Paraquat, even after it knew or should have known of the unreasonable risks from exposure; and concealed, downplayed, or otherwise suppressed, through aggressive marketing and promotion, any information or research about the risks and dangers of exposure to Paraquat.

167. To this day, Defendants have failed to adequately warn of the true risks of Plaintiff's injuries associated with exposure to Paraquat.

168. As a result of its inadequate warnings, Paraquat was defective and unreasonably dangerous when it left Defendants' possession and/or control, were distributed by Defendants, and when Plaintiff was exposed to it.

169. As a direct and proximate result, Plaintiff developed Parkinson's disease, and suffered severe and personal injuries that are permanent and lasting in nature, physical pain and mental anguish, including diminished enjoyment of life, and financial expenses for hospitalization and medical care.

170. WHEREFORE, Plaintiff respectfully request that this Court enter judgment in Plaintiff's favor for compensatory and punitive damages, together with interest, costs herein incurred, attorneys' fees and all relief as this Court deems just and proper.

Count IV – Public Nuisance

171. Plaintiff re-alleges each paragraph above as if fully set forth herein.

172. At all relevant times, Defendants were engaged in the United States Paraquat

business.

173. At all relevant times, Defendants intended and expected that Defendants' Paraquat products would be sold and used in the State of Missouri.

174. Defendants developed, registered, manufactured, distributed, and sold Paraquat for use in formulating Defendants' Paraquat products, and developed, registered, formulated, and distributed Defendants' Paraquat products for sale and use in the United States, including the State of Missouri.

175. For many years, Plaintiff was exposed to Defendants' Paraquat products in the State of Missouri regularly and repeatedly for hours at a time, resulting in the regular, repeated, and prolonged exposure of Plaintiff to Paraquat.

176. At all relevant times, Plaintiff had a right to a healthful environment while living and working in the State of Missouri.

177. Defendants owed a duty to the public, including Plaintiff and other persons whom they could reasonably foresee were likely to use Defendants' Paraquat products or otherwise be in or near places where they were being or recently had been used within the State of Missouri, to provide and maintain a healthful environment in connection with the design, manufacture, and distribution of Paraquat for use in formulating Defendants' Paraquat products, and the design, formulation and distribution of Defendants' Paraquat products, that Defendants intended and expected to be used in the State of Missouri.

178. When Defendants designed, manufactured, and distributed Paraquat for use in formulating Defendants' Paraquat products, and designed, formulated, packaged, labeled, and distributed Defendants' Paraquat products, it was reasonably foreseeable and in the exercise of ordinary care Defendants knew, or in the exercise of ordinary care, should have known that:

a. Defendants' Paraquat products were designed, manufactured, formulated, and packaged such that it was likely to be inhaled, ingested, and absorbed into the bodies of people who used it, who were nearby when it was being used, or who entered fields or orchards where it had been sprayed or areas near where it had been sprayed; and

b. when inhaled, ingested, or absorbed into the body, it was likely to cause latent neurological damage that was both permanent and cumulative, and that repeated exposures were likely to cause neurodegenerative disease, including Parkinson's disease.

179. In doing so, Defendants created a condition that was harmful to Plaintiff's health as well as the health of the general public.

180. At all relevant times, Defendants' Paraquat products were used in a manner that was intended or directed by or reasonably foreseeable to Defendants.

181. All persons living or working near fields or orchards sprayed with Defendants' Paraquat products were and are affected at the same time.

182. An ordinary person of reasonable sensibilities would be disturbed by the condition created by Defendants' conduct.

183. The interference is unreasonable in that it involved a significant interference with the public health, public safety, or public welfare.

184. Defendants knew or should have known their conduct would naturally or probably result in injuries to Plaintiff, but regardless, continued with its conduct in reckless disregard or conscious indifference to those consequences.

185. Plaintiff has suffered harm as a result of Defendants' conduct that is distinct and different than the harm suffered by the general public.

186. As a direct and proximate result of the public nuisance created by Defendants, Plaintiff developed Parkinson's disease, and suffered severe and personal injuries that are permanent and lasting in nature, physical pain, and mental anguish, including diminished enjoyment of life, and financial expenses for hospitalization and medical care.

WHEREFORE, Plaintiff respectfully requests that this Court enter judgment in Plaintiff's favor for compensatory and punitive damages, together with interest, costs herein incurred, attorneys' fees and all relief as this Court deems just and proper.

Count V
Violation of Missouri Merchandising Practices Act
(§407.010 et seq.)

187. Plaintiff incorporates by reference all of the above-stated paragraphs as though fully set forth therein.

188. The Missouri Merchandising Practices Act, Mo. Ann. Stat. § 407.020 et seq., provides in pertinent part:

The act, use or employment by any person of any deception, fraud, false pretense, false promise, misrepresentation, unfair practice or the concealment, suppression, or omission of any material fact in connection with the sale or advertisement of any merchandise in trade or commerce or the solicitation of

any funds for any charitable purpose, as defined in section 407.453, in or from the state of Missouri, is declared to be an unlawful practice.

189. Defendants used in commerce false or misleading descriptions of fact, and/or false or misleading representations of fact, which likely or did cause confusion or mistake. Defendants misrepresented and denied the harmful side effects of their Paraquat-based products.

190. Defendants' false or misleading descriptions of fact, and/or false or misleading representations of fact, caused or likely caused, customer confusion regarding the safety of their Paraquat products.

191. Plaintiff has been and continues to be injured by Defendants' conduct.

192. As a direct and proximate result of the foregoing, Plaintiff developed Parkinson's disease, and suffered severe and personal injuries that are permanent and lasting in nature, physical pain and mental anguish, including diminished enjoyment of life, and financial expenses for hospitalization and medical care.

193. Plaintiff is entitled to recover costs and reasonable attorney's fees pursuant to Mo. Ann. Stat. § 407.025.

Count VI – Breach of Implied Warranty of Merchantability

194. Plaintiff incorporates by reference all of the above-stated paragraphs as though fully set forth therein.

195. At all relevant times, Defendants were engaged in the business of selling Paraquat products.

196. At all relevant times, Defendants intended and expected that Defendants' Paraquat products would be sold and used in the State of Missouri.

197. Defendants developed, manufactured, distributed, and sold Paraquat for use in formulating Defendants' Paraquat products, and developed, registered, formulated, and distributed Defendants' Paraquat products for sale in the United States, including the State of Missouri.

198. Plaintiff was exposed Defendants' Paraquat products in the State of Missouri regularly and repeatedly, for hours at a time, resulting in regular, repeated, and prolonged exposure to Paraquat.

199. At the time of each sale of Defendants' Paraquat products that resulted in Plaintiff's exposure to paraquat, Defendants impliedly warranted that Defendants' Paraquat products were of merchantable quality, including that they were fit for the ordinary purposes for which such goods were used, pursuant to Mo. Ann. Stat. § 400.2-314.

200. Defendants breached this warranty as to each sale of Defendants' Paraquat products that resulted in Plaintiff's exposure to Paraquat, in that Defendants' Paraquat products were not of merchantable quality because they were not fit for the ordinary purpose for which good were used.

As a direct and proximate result of the breaches of the implied warranty of merchantability by Defendants, Plaintiff developed Parkinson's disease, and suffered

[REDACTED]

severe and personal injuries that are permanent and lasting in nature, physical pain and mental anguish, including diminished enjoyment of life, and financial expenses for hospitalization and medical care.

WHEREFORE, Plaintiff respectfully requests that this Court enter judgment in Plaintiff's favor for compensatory and punitive damages, together with interest, costs herein incurred, attorneys' fees and all relief as this Court deems just and proper.

DEMAND FOR JURY TRIAL

Plaintiff hereby demands trial by jury as to all issues.
